WORK EXPERIENCE

Slate (Branched out of Protocol Labs), Software Engineer

2022 - April 2023

San Francisco, US - Remote

- Architected and implemented the browser extension, porting web app core features and adding new functionalities to interact with the user's history and bookmarking
- Optimized the extension load time using techniques like list virtualization and caching, resulting in improved user experience and instant loading
- Proactively engaged with the community by reviewing issues and providing timely support

Technologies: Javascript, NextJS, NodeJs, PostgreSQL, Git

Protocol Labs, Full stack engineer

2021–2022

San Francisco, US - Remote

- Architected and implemented all authentication flows for Slate, including email auth, OAuth 2.0, password reset, and email verification
- Suggested and developed various UX improvements to the product, including new ways to upload files through copy and pasting, drag and drop, as well as developing drag-select support for the app and adding support for multiple file previews
- Led an initiative to enhance app accessibility by following the WARIA guidelines
- Rolled out an analytical dashboard using Metabase, providing the team with valuable product metrics

Technologies: Javascript, NextJS, NodeJs, OAuth, PostgreSQL, Git

Nuvocargo, Frontend engineer

2020–2021

New York, US - Remote

- Developed features across our internal app and maintained our design system
- Shipped the marketing website on a tight schedule for our Series A fundraising round, earning me the honor of being the "Employee of the Quarter"
- Taught myself Ruby and Ruby on Rails, enabling me to ship features across the entire stack
- Led a workshop for the entire engineering organization, analyzing and proposing the company's next frontend testing strategy

Technologies: Javascript, Ruby on Rails, React, Jest, Cypress, Git

Gfree, Co-founder

2019

Tangier, Morocco

- Crafted the project's brand identity and provided a strategic direction for the team

- Developed our design system and internal tools to speed up the development, enabling us to ship the MVP faster.
 - Designed and implemented a WYSIWYG editor for writing recipes and stories
 - Maintained a type-safe codebase, ensuring code quality and maintainability
- Technologies: Typescript, React, Redux, Storybook, Node.js, MongoDB, Git

EDUCATION

BsC Computer Science

2016-2019

Suptem, Tangier Morocco
